

Climate Action Project

What is climate change ?

Ans - Climate change describes a change in average conditions - such as temperature and rainfall in a region over a long period of Time.

Climate Change

Climate change is the global phenomenon of climate transformation characterized by the changes in the usual climate of the planet (regarding temperature, precipitation, and wind) that are especially caused by human activities. As a result of unbalancing the weather of earth, the sustainability of the planet's ecosystem is under threat, as well as the future of humankind and the stability of the global economy.

Causes of Climate Change

Climate change is mainly caused by human activities such as -:

Fossil Fuels

Deforestation

Intensive Farming

Waste Disposal

Minerals

Over-Consumption
